

# BENEFITS OF AN IMPLANT

"Keeps a one tooth problem a one tooth problem"

- Replaces one or more teeth without affecting neighboring teeth
- A long lasting solution
- Helps to prevent bone recession
- Eliminates the risk of dental decay
- Improves your speech, overall self-image and increases your ability to eat an array of foods

## ▼ Missing tooth (Posterior)

• Molar tooth before the treatment

• Molar tooth after the treatment

• Radiograph after the treatment

## PRE-CAUTIONS AFTER IMPLANT SURGERY

1. The surgery site may swell considerably for 2-3 days after the surgery; apply ice on the cheek of the surgery site. If the swollen part is very painful, visit a dental clinic for the appropriate treatment.
2. After surgery, refrain from excessive exercise, overworking, saunas and long showers/baths in hot water until wound is healed.
3. During brushing, avoid contact with the surgery site for 2-3 days (use gargle solution instead).
4. Avoid drinking alcohol and smoking for 2 weeks.
5. Chew food on the opposite side of the surgery site, and avoid hot foods.
6. In the event a bone graft of the maxillary sinus is performed, avoid blowing your nose strongly or spitting.
7. In case of severe bleeding, place cold water soaked gauze in the mouth. If the bleeding persists, visit a dental clinic for the appropriate treatment.

# What happens if a missing tooth is not replaced?

## A missing tooth can lead to potential problems if not treated

- Drifting and shifting of the neighboring teeth causing an unbalanced bite.
- Increased biting stress on other teeth.
- Bone recession in the area of the missing tooth.
- The gap between teeth widens, thereby compromising the esthetic effect.
- Losing your natural smile.

# How can a missing tooth be replaced?

## 1. Removable Partial Denture: (RPD)

It attaches to your natural teeth with metal clasps or devices called precision attachments.

### Drawbacks:

- Increasing stress on the teeth around the area of the missing tooth.
- Bone recession in the area of the missing tooth

Removable Partial Denture

## 2. Fixed Bridge

It is a false tooth fused between two porcelain crowns to fill in the area of the missing tooth. The neighboring teeth are prepared (drilled) to attach a 3-tooth fixed bridge.

### Drawbacks:

- Root canal treatment might be necessary on the prepared teeth.
- Increasing stress on the healthy teeth holding the bridge

Fixed Bridge

## 3. Dental Implants

It is an artificial tooth root, made of titanium metal. Dentist places it into your jaw to hold a replacement tooth or bridge. It is a permanent fixture in your mouth that has excellent long-term success.

It also provides more advanced options for replacing a missing tooth than conventional removable partial denture or a fixed bridge.

It helps to preserve healthy teeth and eliminate the risk of dental decay.
